

COST CONTAINMENT IS BETTER CARE

DELIVERING APPROPRIATE CARE AND MANAGING UTILIZATION IMPROVES OUTCOMES

PMSI's **Home Health Care** program provides the management tools for case managers and claims professionals to effectively manage their home health cases through a holistic approach to care provisioning. The PMSI proprietary methodology utilizes evidence-based medicine that applies clinical pathways to address appropriateness of care.

PMSI's clinical approach employs utilization controls and measures progression of care, which is a strict departure from the traditional transactional approach to Home Health Care. Insightful reports are provided to claims professionals that support effective decision-making and ease the complexity of managing the multitude of services required for the severe injuries that most commonly require in-home care. PMSI's approach is increasing management efficiencies and delivering meaningful cost reduction for even the most complex workers' compensation claims.

To learn more about Home Health Care and all our innovative solutions for containing the cost of workers' compensation, go to www.pmsionline.com/homehealth or call **877.ASK.PMSI**.
